## A|M'solutions

## M3 - High performance and perfect results in every detail

## Features \& benefits

- Easy, ergonomic work piece handling
- Extensive equipment options for every task
- Suitable for machining internal channels and details
- Innovative control with many features such as live tracking of all process parameters

## M|M'solutions

3D post processing technology

## Technical highlights

The M3 system is ideal for post processing of 3D printed metal or plastic components, whenever these components are delicate, have a complex shape, or require extremely gentle processing. The work pieces are individually mounted to fixtures and are totally immersed in the media during the cycle. This ensures effective processing
and a uniform finish, even in internal work piece passages and hard to reach areas. The innovative equipment design allows the finishing of one big component, measuring up to 650 mm , or simultaneous treatment of several smaller components. From now on, also available with batch processing option allowing for maximum flexibility.

Equipment layout (Example)

## Equipment specifications

## Technical data

Inside dimensions processing bowl: $\varnothing 700 \times 540 \mathrm{~mm}$

Height of reception flange: 50 mm

Max. motor speed: 3,000 RPM

Water flow adjustable from 20 to $100 \mathrm{l} / \mathrm{h}$

Compound flow adjustable from 0-2 I/h

Ambient temperature: +5 to $+40^{\circ} \mathrm{C}$

With optional noise protection package $\leq 75 \mathrm{~dB}(\mathrm{~A})$

## Electrical connection

Supply voltage: $400 \mathrm{~V}, 50 \mathrm{~Hz}, 3 \mathrm{Ph} / \mathrm{N} /$ PE*

Control voltage: 24 V DC
*Different connection voltage like US on request also available

## Possible work piece dimensions (mm)

Minimum size: $\quad \varnothing 50 \times 50(\mathrm{H})$
Maximum size: $\quad \varnothing 650 \times 300(H)$
